

At-risk account share is unusually high:
68 of NovaTech's 85 total accounts (80%) are currently flagged "at risk" under the ticket-volume + negative-sentiment criteria, with ACCT-041 the most extreme case at 334 tickets and \$40,722 in deal revenue.
Action: An 80% flag rate suggests either a genuine systemic support problem or a risk threshold that's too loose — recommend Sarah's team review the top 10–15 flagged accounts by revenue first (starting with ACCT-041) rather than treating all 68 as equally urgent.

Priority tiering isn't producing faster resolution:
Average resolution time is nearly flat across priority levels: critical tickets resolve in 56.1 hours vs. 58.9 hours for low-priority — essentially the same speed.
Action: critical-priority tickets should resolve meaningfully faster than low-priority ones; recommend that the support team audit their triage/escalation process, since the priority label doesn't currently appear to change queue behaviour.

Spend vs. revenue attribution gap:
All five channels show attributed revenue far below spend — Partner Referral alone shows a \$6.6M gap despite its strong 34.3% response rate and highest lead volume (807 records). **Action:** This is very likely an artefact of per-touchpoint spend being compared against only-converted-lead revenue rather than a true channel P&L — flag this to Finance/Marketing Ops to confirm the attribution model before using these numbers to justify budget cuts.

Channel response gap:
Direct Mail converts at a 53.0% response rate versus just 8.68% for Email, despite Email carrying real spend. This means Email dollars are producing roughly 6x fewer responses per lead than Direct Mail. **Action:** shift incremental campaign budget from Email toward Direct Mail and Paid Social (40% response), and audit whether Email is being deployed at the wrong funnel stage.

Revenue concentration in two segments:

Enterprise (\$319,423) and Large (\$271,613) accounts together generate \$591,036 — 83.6% of the \$707,201 in total won revenue — while Medium and Small combined contribute under \$117K. **Action:** revenue is heavily concentrated in two tiers; prioritize account-management coverage and renewal protection for Enterprise/Large accounts, since losing even a handful would materially hit the pipeline.
